SauceDemo Manual Testing — Test Summary Report

1. Document Information

- **Project:** SauceDemo Manual Testing
- **Prepared by:** Warisha Fiaz
- **Testing Type:** Manual Functional Testing
- **Report Version:** 1.0
- **Report Status:** Draft — results require final review

2. Summary

Manual testing was performed on selected SauceDemo checkout and post-checkout scenarios. The work focused on required-field validation, checkout navigation, overview information, empty-cart behavior, and cart state after checkout.

The results were recorded in the testing workbook, including actual results and observations requiring further verification.

3. Test Execution Summary

The current workbook contains 11 checkout and post-checkout test records.

Recorded status	Count
Pass	8
Observed	1
Potential Defect	1
Additional Pass — navigation	1
Total records	**11**

Note: These are the statuses entered in the workbook, not independently audited execution statistics. Reconcile the counts with the final Test Cases and Execution Results sheets before publishing.

4. Key Results

Checkout Validation

- Blank checkout fields triggered required-field validation messages.
- Missing Last Name triggered the corresponding validation message.
- Missing Postal Code triggered the corresponding validation message.

Valid Checkout Information

- Valid checkout information was accepted.
- The checkout overview displayed payment information, shipping information, and a price summary.

Empty-Cart Behavior

- The empty-cart summary displayed an item total of $0.00, tax of $0.00, and total of $0.00.
- An order confirmation was observed after completing checkout with an empty cart.

This behavior remains a **potential defect requiring verification** against the intended application requirements.

Post-Checkout Behavior

- The Back Home button returned to the Products page.
- The cart badge was empty.
- The cart contained no products after the observed checkout flow.

5. Outstanding Items

- Verify the empty-cart checkout behavior before confirming a defect.
- Confirm that all recorded test cases have matching execution records.
- Review the workbook for consistent statuses and traceability.
- Ensure that screenshots correspond to the scenarios described in the workbook.

6. Evidence

Screenshots are stored in the `Test-Evidence` folder. They should be reviewed alongside the related test case IDs and actual results.

7. Conclusion

The documented test run covered selected checkout and post-checkout workflows. Required-field validation and navigation behaved as expected in the reported observations. Empty-cart order completion remains an area for further investigation.

The report should be finalized after the workbook's statuses, execution records, and evidence have been reconciled.

8. Limitations

This report covers selected manual functional tests only. It does not represent complete application testing or include performance, security, API, or automated testing results.
